

Vökl Professional Firefighting & Rescue Boots

Vökl professional firefighting and rescue boots are renowned for their comfort, durability and performance.

Born out of the merger of two companies; Vökl Outdoors and Stumpff & Baier, one known for outdoor equipment, the other as a military boot manufacture. The unique combination of skills possessed by Vökl Professional provides the rescuer with boots that combine outdoor sports comfort and fit with the durability, performance and cost of manufacture of military footwear.

Key Features of all Vökl boots:

Designed to last:

The leather stitching and lacing configuration are specifically designed to outlast similar boots.

Whilst most firefighting boots rely on insoles to provide anti-static properties, Vökl Professional boots are designed with the anti-static conductor fully integrated into the boot structure meaning that even if you change your insoles, charge is always dissipated through the sole.

Thanks to reinforcement integrated into Vökl Professional boots, they will not change shape over time. Leather naturally softens and sags, however their design means that your boots will have the same fit in years after you first tried them on.

All Vökl Professional boots feature a scuff cap to protect the toe from wear and tear when kneeling or crawling, it is glued with heat resistant adhesive and double-stitched for extra security.

Fit:

Wide toe area provides the best fit for all wearers whilst ski boot-style construction provides excellent foot positioning and fit to provide comfort and stability for all wearers. Strategically placed padding around the Achilles tendon provides secure foot positioning and almost no movement when walking.

Superior sole construction:

Automated production allows for much greater width of PU inner between sole and foot bed thereby increasing comfort and insulation from cold and heat.

Higher levels of safety and comfort:

Vökl Professional leather breathability measure displays performance over five times the requirements of EN15090:2012 Footwear for Firefighters. This combined with the Sympatex HigH2Out breathable membrane system ensures all-day dryness.

Despite the trend for Kevlar midsole protection, Vökl continue to use a 1mm steel midsole. Steel provides much greater real-life protection than Kevlar - approximately 55% more.

Vökl's toe caps are anatomically designed to allow maximum room for toes and are optimised for use with our midsoles. The interface between toe protector and boot body is virtually indistinguishable thereby further enhancing wearer comfort.

Vökl Professional Firefighting & Rescue Boots

Primus 21 Sympatex (CS)

Pull-on, zip-on, lace-up boot for firefighting and rescue use.

- Black smooth waterproof leather (2.4-2.6mm), shaft construction, no side seams, reflective detail.
